

WordPress Tutorials

Where to begin:

So you have a brand new WordPress website. Now what?

It's a little like having a brand new car and not knowing how to drive. It's time to learn!

You can take your brand new website out for a spin.....

OR, it might be wise to log a few hours on a “*simulator*” beforehand.

If you crash and burn on the simulator it's not fatal, but on your live site that's another matter.

Simulator:

DesktopServer by ServerPress is a good way to load WordPress on your local computer and practice before you make edits to your live site.

1. Step one get the free version of [DesktopServer](#) and install it.
 - a. [How to install DesktopServer](#)
 - b. [Getting started with DesktopServer](#)

Now that you have a simulator to learn on you can try everything in the following tutorials, without fear that you might break your live site.
